The Legal Construction of Personal Work Relations Mar 20 2022 This book explores the conceptual framework of European employment law, focusing on understanding the law's construction of employment relationships. The book draws on extensive comparative research of the legal architecture of employment relations in national legal systems and EU law to analyse the traditional model of the contract of employment and the difficulties of using the traditional model to frame modern working relationships. The authors then present a new model of the foundations of employment relationships, based on the concept of a personal work nexus, and explore the potential of their model to shape the future development of employment law. Throughout the book, the authors analyse the interaction of domestic and EU employment law, and discuss the possibility of future legal harmonisation in the area. They conclude by exploring the potential for a common framework for European employment law, in the context of broader debates surrounding the harmonisation of European private law.

Flood Risk Science and Management Mar 08 2021 Approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years. Worldwide, there has been a move from a strategy of flood defence to one of flood risk management. Flood risk management includes flood prevention using hard defences, where appropriate, but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur. This change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically, environmentally, and in terms of social equity. Flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding, but also the consequences. This is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change, while socio-economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned. Flood Risk Science and Management provides an extensive and comprehensive synthesis of current research in flood management; providing a multi-disciplinary reference text covering a wide range of flood management topics. Its targeted readership is the international research community (from research students through to senior staff) and flood management professionals, such as engineers, planners, government officials and those with flood management responsibility in the public sector. By using the concept of case study chapters, international coverage is given to the topic, ensuring a world-wide relevance.

Berenike and the Ancient Maritime Spice Route Aug 25 2022 The legendary overland silk road was not the only way to reach Asia for ancient travelers from the Mediterranean. During the Roman Empire's heyday, equally important maritime routes reached from the Egyptian Red Sea across the Indian Ocean. The ancient city of Berenike, located approximately 500 miles south of today's Suez Canal, was a significant port among these conduits. In this book, Steven E. Sidebotham, the archaeologist who excavated Berenike, uncovers the role the city played in the regional, local, and "global" economies during the eight centuries of its existence. Sidebotham analyzes many of the artifacts, botanical and faunal remains, and hundreds of the texts he and his team found in excavations, providing a profoundly intimate glimpse of the people who lived, worked, and died in this emporium between the classical Mediterranean world and Asia.

Process and Procedure in EU Administration Feb 07 2021 This book is about the administrative procedures of the European Union, which we see as the 'super glue' holding in place the sprawling structures of the EU governance system. The early chapters deal with the structures expansively defined, the diverse functions of administrative procedures in the EU and the values that underpin them, concentrating on the respective contributions of the legislature and administration. A separate chapter deals with the important procedural function of rights protection through the two Community Courts and the contribution of the European Ombudsman. We then turn to 'horizontal' or general procedures, dealing with executive law-making, transparency and the regulation of government contracting. A study of Commission enforcement procedure ends the section. 'Vertical' or sector-specific studies in significant areas of EU administration follow, including competition policy, cohesion policy (structural funds) and financial services regulation. Separate chapters deal with policing cooperation through Europol and with the interplay of international and EU institutions in the fields of environmental procedure and human rights. The final chapter contains the authors' reflections on current proposals for codification but ends with a general evaluation of the role and contribution of administrative procedure in the construction of the EU.
