Direct Practice Skills for Evidence-based Social Work
Jul 02 2020
Featuring an evidence- and strengths-based approach to practice methods, this new text teaches students how to apply social work skills in a variety of settings. Designed to enhance self-awareness, professionalism, ethical reasoning, cultural sensitivity, and an appreciation for social justice issues, this text introduces readers to social work's core values and practice methods to help them assimilate the skills needed for working in the field. Cases and skills-based exercises demonstrate how to make accurate assessments and design effective intervention plans. After laying the groundwork in theory, values, and ethics, the authors review methods for working with individuals, children, and families from an individual and environmental strengths-based perspective. Client engagement, assessment, intervention, evaluation and termination, and documentation are then reviewed. Readers are introduced to the foundational concepts of social work practice and through application learn to successfully work with clients. Highlights include: Integrates the Council on Social Work Education's EPAS standards and core competencies throughout, including engagement, assessment, intervention, evaluation,

social justice, ethics, critical thinking, professional conduct and decision making, and cultural competency and diversity. Case scenarios in client interview format that closely resemble actual interactions, followed by questions, test readers' understanding of the practice skills needed to work in the field. Skill-building exercises including individual and group activities, role plays, simulations, and discussion questions that provide an opportunity to apply one's knowledge and skill sets. Personal reflections that encourage students to examine their own beliefs to help them assimilate social work ethics and values into their professional demeanor. Icons throughout the text that draw attention to useful tips for developing direct practice skills. A strengths-based approach that heightens understanding and results in a higher level of proficiency in the change process. Introduces challenging situations often encountered in practice to help readers acquire the more advanced practice skills necessary for assessment and intervention. Resources including PowerPoints, test questions, sample syllabi, and suggested answers to text exercises and discussion questions.

The Geometry of Meaning Jan 20 2022 A novel cognitive theory of semantics that proposes that the meanings of words can be described in terms of geometric structures. In *The Geometry of Meaning*, Peter Gärdenfors proposes a theory of semantics that bridges cognitive science and linguistics and shows how theories of cognitive processes, in particular concept formation, can be exploited in a general semantic model. He argues that our minds organize the information involved in communicative acts in a format that can be modeled in geometric or topological terms—in what he terms conceptual spaces, extending the theory he presented in an earlier book by that name. Many semantic theories consider the meanings of words as relatively stable and independent of the communicative context. Gärdenfors focuses instead on how various forms of communication establish a system of meanings that becomes shared between interlocutors. He argues that these “meetings of mind” depend on the underlying geometric structures, and that these structures facilitate language learning. Turning to lexical semantics, Gärdenfors argues that a unified theory of word meaning can be developed by using conceptual spaces. He shows that the meaning of different word classes can be given a cognitive grounding, and offers semantic analyses of nouns, adjectives, verbs, and prepositions. He also presents models of how the meanings of words are composed to form new meanings and of the basic semantic role of sentences. Finally, he considers the future implications of his theory for robot semantics and the Semantic Web.

The Informed Parent Aug 23 2019 The latest scientific research on home birth, breastfeeding, sleep training, vaccines, and other key topics—to help parents make their own best-informed decisions. In the era of questionable Internet "facts" and parental oversharing, it's more important than ever to find credible information on everything from prenatal vitamins to screen time. The good news is that parents and parents-to-be no longer need to rely on an opinionated mother-in-law about whether it's OK to eat sushi in your third trimester, an old college roommate for sleep-training "rules," or an online parenting group about how long you should breastfeed (there's a vehement group for every opinion). Credible scientific studies are out there – and they're "bottom-lined" in this book. The ultimate resource for today's science-minded generation, The Informed Parent was written for readers who prefer facts to "friendly advice," and who prefer to make up their own minds, based on the latest findings as well as their own personal preferences. Science writers and parents themselves, authors Tara Haelle and Emily Willingham have sifted through thousands of research studies on dozens of essential topics, and distill them in this essential and engaging book. Topics include: Home birth * Labor induction * Vaginal birth vs. Cesarean birth * Circumcision * Postpartum depression * Breastfeeding * Vaccines * Sleep training * Pacifiers * SIDS * Bed-sharing * Potty training * Childhood obesity * Food sensitivities and allergies * BPA and plastics * GMOs vs. organic foods * The hygiene hypothesis * Spanking * Daycare vs. other childcare options Full reference information for all citations in the book

In the Valley Mar 22 2022 From the New York Times bestselling, award-winning writer of *Serena* "One of the great American authors at work today" (The New York Times) gives us a short story collection of haunting allegories about the times we live in—from the perils of capitalism to the extraordinary acts of decency and heroism that exist within them—and the return of the villainess who propelled Rash's famed *Serena* to national acclaim. Ron Rash has long been a revered presence in the landscape of American letters. A virtuosic novelist, poet, and story writer, he evokes the beauty and brutality of the land, the relentless tension between past and present, and the unquenchable human desire to be a little bit better than circumstances would seem to allow. In these ten stories, Rash, "a gorgeous, brutal writer" (Richard Price) working at the height of his powers, has created a mesmerizing look at the imperfect world around us, from the severing of ties to the natural world in the relentless hunt for profit to the destruction of body and soul with pills meant to mute our pain. Rash's stories are unforgettable—"Baptism" was chosen by Roxane Gay for inclusion in *The Best American Short Stories 2018*, and "Neighbors" was selected by Jonathan Lethem for *The Best American Mystery Stories 2019*. And in revisiting *Serena Pemberton*, Rash updates his bestselling parable of greed run amok as his deliciously vindictive heroine returns to the North Carolina wilderness she left scarred and desecrated to make one final effort to kill the child that threatens all she has accomplished.

Cost-Based Oracle Fundamentals Sep 16 2021 The question, "Why isn't Oracle using my index?" must be one of the most popular (or perhaps unpopular) questions ever asked on the Oracle help forums. You've picked exactly the right columns, you've got them in the ideal order, you've computed statistics, you've checked for null columns—and the optimizer flatly refuses to use your index unless you hint it. What could possibly be going wrong? If you've suffered the frustration of watching the optimizer do something completely bizarre when the best execution plan is totally obvious, or spent hours or days trying to make the optimizer do what you want it to do, then this is the book you need. You'll come to know how the optimizer thinks, understand why it makes mistakes, and recognize the data patterns that make it go awry. With this information at your fingertips, you will save an enormous amount of time on designing and trouble-shooting your SQL. The cost-based optimizer is simply a piece of code that contains a model of how Oracle databases work. By applying this model to the statistics about your data, the optimizer tries to efficiently convert your query into an executable plan. Unfortunately, the model can't be perfect, your statistics can't be perfect, and the resulting execution plan may be far from perfect. In *Cost-Based Oracle Fundamentals*, the first book in a series of three, Jonathan Lewis—one of the foremost authorities in this field—describes the most commonly used parts of the model, what the optimizer does with your statistics, and why things go wrong. With this information, you'll be in a position to fix entire problem areas, not just single SQL statements, by adjusting the model or creating more truthful statistics.

Discretization Methods and Iterative Solvers Based on Domain Decomposition Oct 29 2022 Domain decomposition methods provide powerful and flexible tools for the numerical approximation of partial differential equations arising in

the modeling of many interesting applications in science and engineering. This book deals with discretization techniques on non-matching triangulations and iterative solvers with particular emphasis on mortar finite elements, Schwarz methods and multigrid techniques. New results on non-standard situations as mortar methods based on dual basis functions and vector field discretizations are analyzed and illustrated by numerical results. The role of trace theorems, harmonic extensions, dual norms and weak interface conditions is emphasized. Although the original idea was used successfully more than a hundred years ago, these methods are relatively new for the numerical approximation. The possibilities of high performance computations and the interest in large-scale problems have led to an increased research activity.

Brain-Based Worship Jul 14 2021 Historically, it has been believed that Christian formation occurs primarily in the context of worship. Because both traditional and contemporary worship services are routinely structured around the skills of persuasive rhetoric and logic, most worship services effectively ignore the impact of experiential, embodied knowledge. Recent research in neuroscience has proven that humans are sensory-motor-emotional-thinking beings who learn best when body, brain, and emotions are simultaneously engaged. A fresh paradigm for teaching, brain-based learning, is proving to result in learning that is more memorable, more likely to result in long-term change in the behavior of the learner, and more likely to spur the learner to investigate the subject further. The Church needs to employ brain-based teaching methods in order to more effectively transmit the Gospel.

Written by experts from a variety of backgrounds, each chapter features an analysis of clinical cases based on the Root Cause Analysis (RCA) methodology, along with case-based discussions on various patient safety topics. The systems and processes outlined in the book are general and broadly applicable to institutions of all sizes and structures. The core ethic of medical professionals is to "do no harm". *Patient Safety* is a
