There is advice all over the place about the rules to follow if you want to succeed, the do's and don'ts of running a company, the how-to of how-to do this, that or the next thing. There are also many personalities out there telling young entrepreneurs to hustle non-stop, risk everything and never sleep if they want success. **YOUR CHANCE OF FAILURE IS ALMOST GUARANTEED.** No one talks about how hard it is, how lonely it is and how difficult it is to build a business. No one is willing to forgo their ego and be honest. If nothing else, Nic Haralambous is honest about his journey. **MOST PEOPLE WON'T LEARN.** Nic has lived the hustle; he has pushed through physical pain, mental suffering, business failures, personal torment and relationship strife all in the name of building businesses. **ALMOST NO ONE DOES IT AGAIN.** Nic decided to write a big book of his failures so that entrepreneurs around the world can begin to understand that it is not always glamorous, easy or fun to build a business. If entrepreneurship is calling you then you absolutely cannot miss out on the truth, behind the business, written by Nic Haralambous.

A Simpler Life Jul 13 2021 This book explores ideas around minimalism, simplicity and how to live comfortably with less. The modern world can be a complicated, frenzied, and noisy place, filled with too many options, products, ideas and opinions. That explains why what many of us long for is simplicity: a life that can be more pared down, peaceful, and focused on the essentials. But finding simplicity is not always easy; it isn't just a case of emptying out our closets or trimming back commitments in our diaries. True simplicity requires that we understand the roots of our distractions - and develop a canny respect for the stubborn reasons why things can grow complex and overwhelming. This book is a guide to the simpler lives we crave and deserve. It considers how we might achieve simplicity across a range of areas. Along the way, we learn about Zen Buddhism, modernist architecture, monasteries, psychoanalysis, and why we probably don't need more than three good friends or a few treasured belongings. It isn't enough that our lives should look simple; they need to be simple from the inside. This book takes a psychological approach, guiding us towards less

contorted hearts and minds. We have for too long been drowning in excess and clutter from a confusion about our aspirations; A Simpler Life helps us tune out the static and focus on what properly matters to us.

The Effect of Repeated Electroshock on Learning in Depressives

May 11 2021 Although clinical observations abound, substantiated evidence concerning the effect of electroshock treatment on learning capacity, particularly in depressed patients, is scanty and experimental findings have been conflicting. The experiments reported here were accordingly conducted as a pilot investigation, visual learning tests involving spatial relations being used to examine in depressed patients: - (a) The extent to which a single electroshock (ES) impairs learning capacity, and the amount of its restoration 30 min, four hours and twenty-eight hours after shock. (b) The effect of repeated shocks (EOT) on learning capacity. (c) The relationship between possibly influential factors and changes in learning performance. (d) The extent of personality change recorded by "expressive movement" scores after three shocks. Before the experiments, extensive testing was carried out to determine the most suitable testing times. Important points emerging from an initial experiment were re-investigated with a more appropriate test. Finally, certain scores of expressive movement derived from a greatly improved scoring system were used to assess personality changes resulting from electroshock.

The Garden Journal, Planner and Log Book Feb 20 2022 For the gardener who wants to enjoy the benefits of gardening, without the frustrations. FOR THE COST OF ONE SIMPLE GARDEN TOOL, you can OWN THE MOST VALUABLE GARDEN TOOL OF ALL; one that will save you hundreds and perhaps thousands of dollars in mistakes. Even more valuable than your favorite garden trowel or spade is a written record of what works in your garden.

WHILE GARDENING BOOKS AND THE INTERNET ARE FULL OF GREAT ADVICE, THEY CAN'T REPLACE PERSONAL EXPERIENCE. Your garden is in your micro-climate, with your soil. Perennials in one part of the country aren't perennials in another. There are simply too many plants and too many variables for anyone to remember from year to year what worked where and what didn't and why. You need to remember **WHAT WORKS FOR YOU-IN YOUR GARDEN**. Every gardener faces repeat attacks of pests or disease and needs to remember which treatment worked and which did more harm than good. Every gardener has weeded out emerging perennials, forgetting what they planted where. Every gardener needs a memory! **THE GARDEN JOURNAL, PLANNER & LOG BOOK** is a book of garden forms with the flexibility needed to personalize your style of record keeping. With this one book you can track your purchases from store to harvest to propagation, and never waste money and labor again. What really makes the difference between a great and a mediocre garden is how well the gardener keeps track of all the information needed to enhance success and avoid repeated failures. **GARDENING IS AN ART, BUT IT'S ALSO A SCIENCE**. **THE GARDEN JOURNAL , PLANNER & LOG BOOK** is designed to make record-keeping simple and easy. Every form is designed to include all the pertinent information needed, while minimizing the amount of time required to record that information. Just on the individual plant pages alone, there are over fifty possible check boxes for each plant. Use as many or as few as you desire, and record as much or as little as you wish in the spaces for other information. * Fill out log pages for annuals, biennials and perennials, with the location of each plant * Keep track of the lifecycle of all your flowers, herbs, vines, etc. on log pages. * Fill in the times to prune, trim and tidy which plants by season, depending on your area. * Make a plan for up to four years on the planning pages. * Draw out garden plots for twenty beds on graph paper with notes on the pages opposite. * Keep records of

hardscaping, weather, formulas, pests and diseases, cultivation and propagation, bloom and harvest times, flowers, bulbs, fruit, vegetables, herbs, vines, shrubs and trees. * Keep a diary for all the things you simply must write out using sentences or drawings, because as much as gardening is a science, it is an art above all. YOUR GARDEN WILL LOOK LIKE ART; but you will know that THE GARDEN JOURNAL, PLANNER & LOG BOOK is the science behind your success. Author's note: The book binding is hinged on the 11" top edge, to open like a calendar. Due to the fact that the printing company does not have in place protocols to handle an 11" landscape spine layout, the result is an incorrectly rotated image on the sales page.

A First Course in Machine Learning Jul 21 2019 A First Course in Machine Learning covers the core mathematical and statistical techniques needed to understand some of the most popular machine learning algorithms. The algorithms presented span the main problem areas within machine learning: classification, clustering and projection. The text gives detailed descriptions and derivations for a small number of algorithms rather than cover many algorithms in less detail. Referenced throughout the text and available on a supporting website (<http://bit.ly/firstcourseml>), an extensive collection of MATLAB®/Octave scripts enables students to recreate plots that appear in the book and investigate changing model specifications and parameter values. By experimenting with the various algorithms and concepts, students see how an abstract set of equations can be used to solve real problems. Requiring minimal mathematical prerequisites, the classroom-tested material in this text offers a concise, accessible introduction to machine learning. It provides students with the knowledge and confidence to explore the machine learning literature and research specific methods in more detail.

Learning and Memory Sep 03 2020 This thoroughly updated edition provides a balanced review of the core methods and the latest research on animal learning and human memory. The relevance of basic principles is highlighted throughout via everyday examples to ignite student interest, along with more traditional examples from human and animal laboratory studies. Individual differences in age, gender, learning style, cultural background, or special abilities (such as the math gifted) are highlighted within each chapter to help students see how the principles may be generalized to other subject populations. The basic processes of learning – such as classical and instrumental conditioning and encoding and storage in long-term memory in addition to implicit memory, spatial learning, and remembering in the world outside the laboratory – are reviewed. The general rules of learning are described along with the exceptions, limitations, and best applications of these rules. The relationship between the fields of neuropsychology and learning and memory is stressed throughout. The relevance of this research to other disciplines is reflected in the tone of the writing and is demonstrated through a variety of examples from education, neuropsychology, rehabilitation, psychiatry, nursing and medicine, I/O and consumer psychology, and animal behavior. Each chapter

begins with an outline and concludes with a detailed summary. A website for instructors and students accompanies the book. Updated throughout with new research findings and examples the new edition features: A streamlined presentation for today's busy students. As in the past, the author supports each concept with a research example and real-life application, but the duplicate example or application now appears on the website so instructors can use the additional material to illustrate the concepts in class. Expanded coverage of neuroscience that reflects the current research of the field including aversive conditioning (Ch. 5) and animal working memory (Ch. 8). More examples of research on student learning that use the same variables discussed in the chapter, but applies them in a classroom or student's study environment. This includes research that applies encoding techniques to student learning, for example: studying: recommendations from experts (Ch. 1); the benefits of testing (Ch. 9); and Joshua Foer's Moonwalking with Einstein, on his quest to become a memory expert (Ch. 6). More coverage of unconscious learning and knowledge (Ch. 11). Increased coverage of reinforcement and addiction (Ch. 4), causal and language learning (Ch. 6), working memory (WM) and the effects of training on WM, and the comparative evolution of WM in different species (Ch. 8), and genetics and learning (Ch. 12).
