[The Illustrative Book of Cartilage Repair](#) Jul 28 2022 This book employs a wealth of high-quality illustrations to provide the reader with a detailed understanding of the anatomy and the histology of the cartilage, the etiology and the classification of the cartilage lesions, and the numerous techniques employed for cartilage repair. Detailed attention is devoted to healthy cartilage, to each stage of the degenerative process, and to the response of the cartilage to the treatment. Imaging of the cartilage and the repaired cartilage, as well as the information on the biomechanics are provided in great detail. The chapters on the techniques cover a wide range of approaches: marrow stimulation techniques, osteochondral cylinder transfer techniques, first, second and third generation autologous chondrocyte implantation techniques, allografts, cell-based therapies, orthobiologic approaches, and the role of 3D printing. The chapters closes with a consideration of the success of rehabilitative devices and the long-term results of cartilage repair. The book will be invaluable for all general orthopaedic and arthroscopic surgeons seeking a deeper knowledge of cartilage science and to dispel the confusion that still surrounds the reparative treatment. The authors are recognized experts in the fields of cartilage histology, assessment, classification, and repair.

RNA Damage and Repair Jan 22 2022 Ribonucleic acid (RNA) is a macromolecule that plays a central role in cell physiology: RNA molecules act as intermediates between the deoxyribonucleic acid (DNA), where genetic information is stored, and proteins, which perform the necessary functions within the cell. Traditionally, the structural and functional properties of RNA are closely linked to gene expression. However, RNA-based enzymes, called ribozymes, are also involved in catalysis. Small RNAs regulate key cellular processes, such as cell growth, division, differentiation, aging, and death. RNA is a sensitive macromolecule that can be easily damaged by environmental conditions (ultraviolet radiation, oxidative stress) and biological factors (ribonucleases, ribotoxins, CRISPR systems). Therefore, cells have developed mechanisms to protect and/or repair RNA molecules. This book presents an overview of the biology of RNA damage, protection and repair in prokaryotes and eukaryotes. Individual chapters cover the expression regulation, enzymology and physiological functions of such systems, and link them to important human diseases such as cancer and degenerative diseases. Endovascular Aortic Repair Apr 12 2021 This text provides a comprehensive, state-of-the-art review of complex endovascular aortic techniques. It will serve as a valuable resource for vascular and cardiovascular surgeons, interventionalists, cardiologists, clinicians, bioengineers and researchers with an interest in complex aortic diseases. The book reviews imaging modalities, diagnostic workups and novel endovascular approaches. Technical aspects are provided by experts in the field, with 600 illustrations and photographs of key steps for each type of procedure. Results of epidemiological studies and national databases are summarized, as well as large institutional experiences. An evidence-based approach is used for recommendations regarding best therapies. Other highlights in this unique text include: A new, state-of-the-art review on fenestrated, branched and parallel stent-graft techniques from procedure planning to stent design and implantation. A text dedicated to fenestrated and branched stent-grafts that has been increasingly recognized by vascular specialists as a priority area in aortic management. An updated overview of current designs and future developments. Special attention to technical details of the procedures with use of illustrations. Technical tips on how to get out of problems during these challenging procedures. Endovascular Aortic Repair: Current Techniques with Fenestrated and Branched and Parallel Stent-Grafts will serve as a very useful resource for physicians and researchers dealing with and interested in complex aortic diseases. It will provide a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts. All chapters are written by experts in their fields and include most up to date scientific and clinical information.

Training of trainers manual on the operation, maintenance and repair of farm machinery Nov 19 2021

This training of trainers (ToT) manual aims to provide insights into the operation, maintenance and basic repair of farm machinery. It provides an overview of the main concepts of equipment that can facilitate sustainable agriculture practices, with examples and guidelines on the topic. Its objective is to provide extension officers, technicians, mechanics, and youth with the necessary information and skills to become trainers and deliver technical capacity sessions on this topic. The manual is a mix of theory and practice in this training. Participants must have the time to individually

perform the different tasks described in the modules with close supervision. The training man
comprises four modules: ? Module 1 covers different tractors as a power source and power t
operations. ? Module 2 focuses on the implements and equipment attached to tractors for fi
operations. ? Module 3 is about harvest, post-harvest and storage technologies. ? Module 4 c
general aspects and tips for maintenance, spare parts and replacements.
